

# Fabric cover for printers

Fabric covers allows thermal printer work in low temperatures. Their construction allows easy handling and fast exchange of consumables. Covers have low weight and are easy to clean. They are water resistant but not waterproof.

## Materials used in covers:

External fabric: ballistic nylon on PVC backing;  
Insulating layer: 10mm PE foam;  
Internal layer: aluminium fabric;

## Heating system:

System has 4x8W heaters (standard)  
- enabling continuous work.  
External power supply 230V .  
Max working temperature of the heater: +40 Celsius

## Work conditions:

Standard (4x8W) covers allows printer to work in temperatures -5..-10 Celsius and even to -25 Celsius\*.

All heaters have CE certificate.

\*Working temperature depends on printer work conditions and for the lower temperatures (below -10 Celsius) cover should to be tested in the workplace first.
